	Location-based Travel Journal Mobile App (App Name: My Wander Diary)
	Dela Cruz, Frances Julianne | Villamiel, Denis Leeroi

Description

My Wander Diary is a location-based travel journal mobile app that allows users to document their travels and adventures by recording their location at various points and enabling them to attach text, photos, and/or other media to journal entries. The app operates in the background, detecting when users enter a new city, landmark, or general point of interest outside of their usual location. Once a new location is detected, users are prompted by the app through a notification to add journal entries for that specific location. The app organizes entries either chronologically or geographically, letting users reflect on their trips visually on a map.

Services / APIs

Geolocation/Maps

- To track user location on the map in real-time
- To track user movement on the map in real-time
- To handle the activation of push notifications to users

Service (background running)

- To allow location tracking even with the app not in use and with the phone screen turned off

Usage of 3rd-party APIs

- Google Maps API: To be utilized as the app's main map and location services provider
- Google Firebase: To store user journal entries and user location history

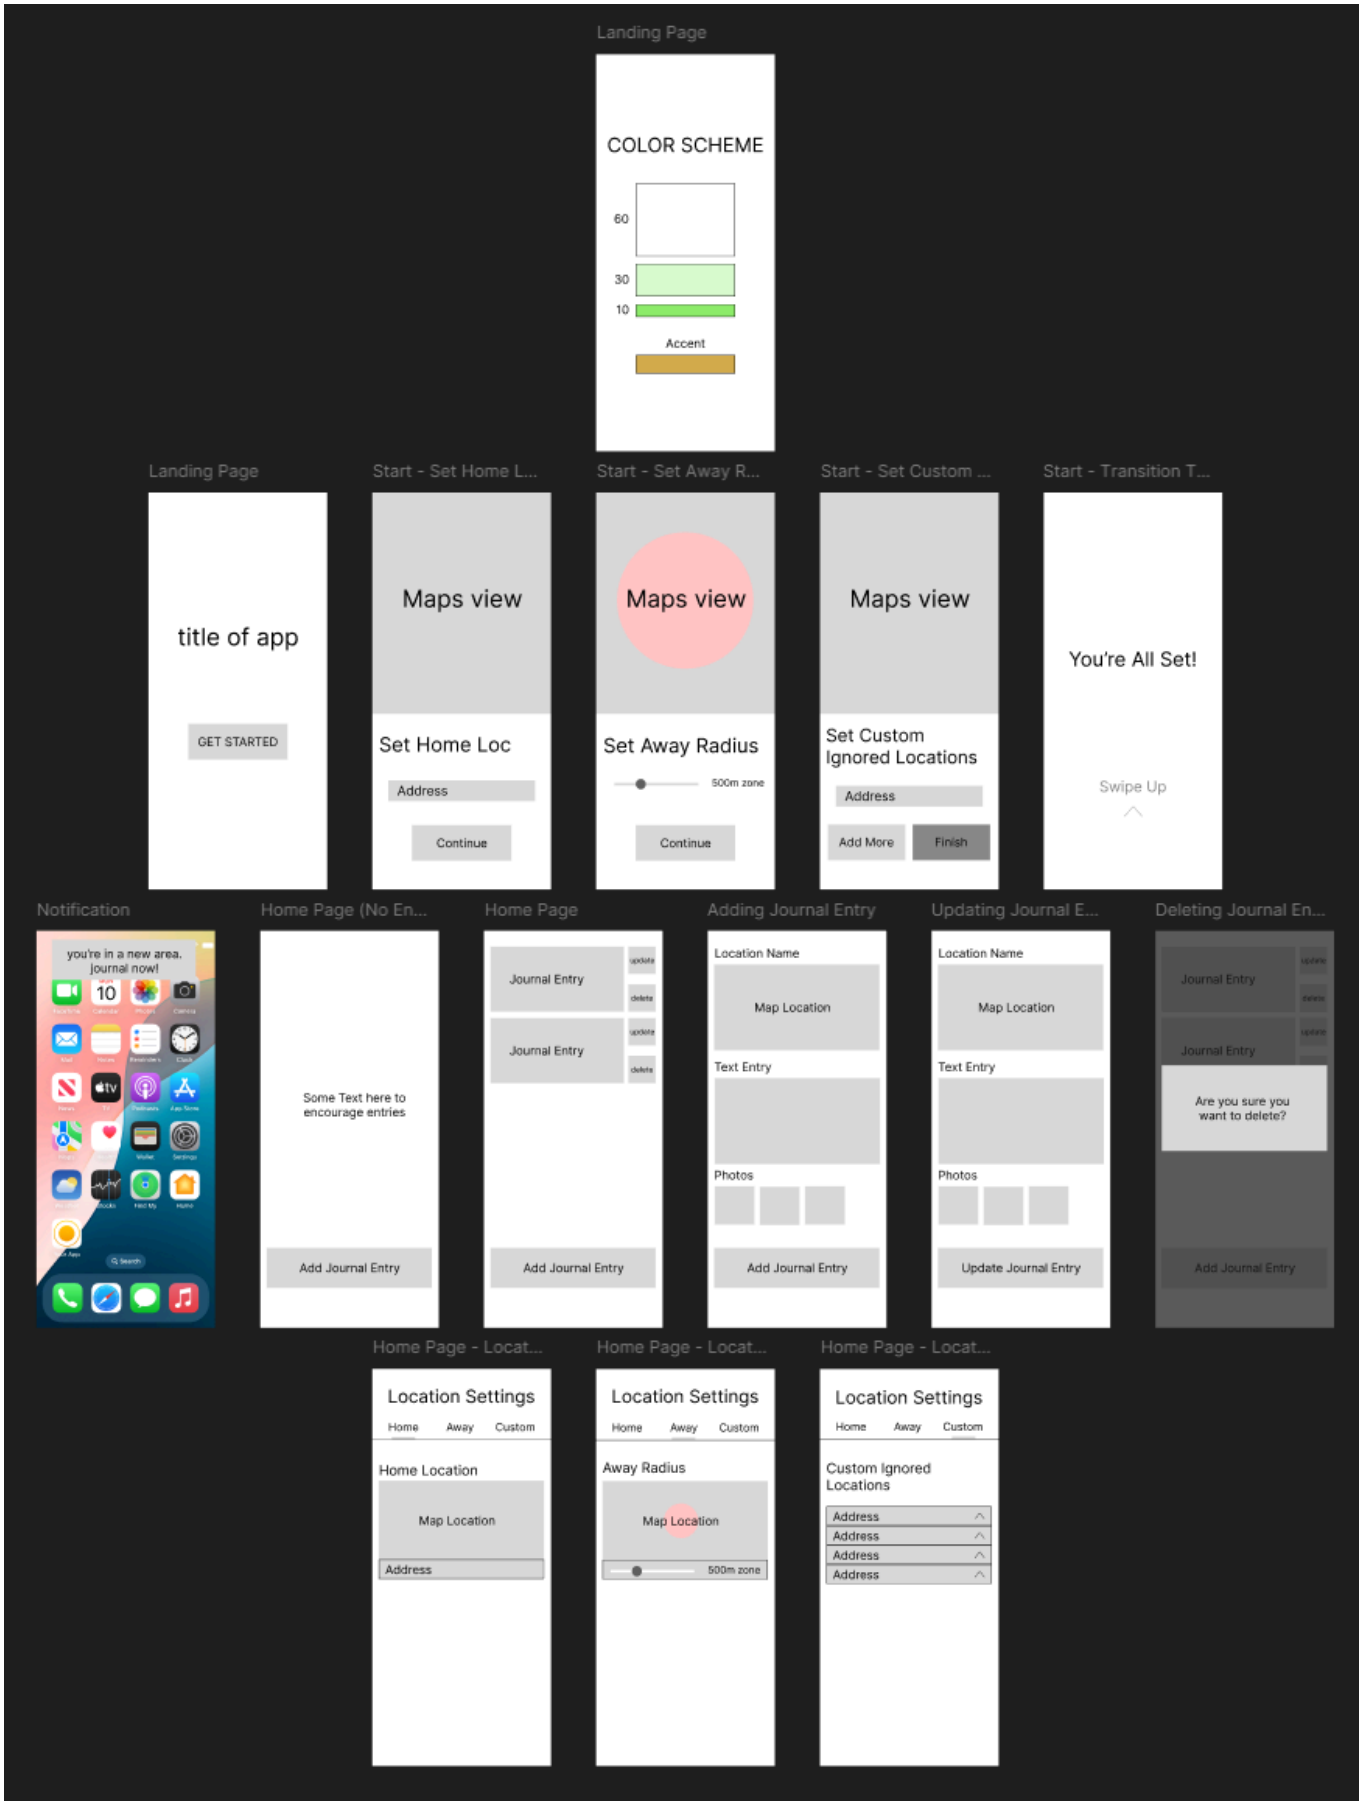

Functions

Function	Description
Set Location Details	Upon first time setting up the app, the user must first set location-related details before gaining access to the mobile application. These include: • Home Location - The location of the user's home • Home Radius - The radius that centers around the user's home. This will be used for detecting whether a user has left their usual location (Geofencing) • Work Location - The location of the user's workplace where the app will not trigger the area as a new location • Custom Ignored Locations - Additional locations that a user can set that are outside of the Home Radius that won't activate the app's notification function
View Journal Entries	The main menu of the mobile app lets the user view their existing journal entries. The entries may be viewed as a list of their journal entries in chronological order. They may also be viewed geographically through a map with pins for each location where they created a journal entry.
Create Journal Entry	The user may create a journal entry whenever they visit a new location outside of their home. A journal entry logs the user's landmark and location on the map. A journal entry also allows the user to include the following media: • Text entry • Photo/s
Update Journal Entry	The user may choose to update the details of any of their existing journal entries.

Delete Journal Entry	The user may choose to delete any of their existing journal entries.
New Location Notification	The app will notify the user that there is an opportunity to create a journal entry at the user's current location. The notification will be pushed to the user's mobile device as soon as the following conditions are met: • The app detects that the user is in a location or area of interest that is outside of their set Home Radius • The app detects the user has become stationary after a few minutes of movement
